

DUC-3110 INJECTOR CLEANER

TECHNICAL SPECIFICATION

The DUC-3110 is an ideal tool for the after-market repair workshop and mobile tuning specialist. It is primarily used in conjunction with the ITC-3100 for the cleaning of petrol engine injectors to rectify running problems and improve fuel efficiency, however it can

also be used as a stand-alone tool to clean many other small intricate components. The DUC-3110 uses a high frequency generator and variable temperature control to provide high efficiency cleaning with incredible results.

Operation

The DUC-3110 is quick and simple to operate. The injectors are submerged in the tank using the parts tray and then, using a combination of high frequency and heat, they are cleaned to precision.

The DUC-3110 is also fully compatible with the Boston ITC-3100 petrol injector testing unit. The injectors are operated whilst submerged in the DUC-3110 by the ITC-3100 using a sequence specifically designed to further improve the efficiency of the cleaning process.

The Cleaning solution has been carefully developed to provide optimum results when used with Rubber, Plastic and of course metal.

During the cleaning process, the DUC-3110 makes use of the "Cavitations" effect. Vibration at high ultrasonic frequencies create microscopic air bubbles which aggressively attack even the smallest traces of residual carbon deposits. A deep and consistent clean is guaranteed almost every time.

Technical Features

- Innovative design and compact structure
- Adjustable heat control system
- Working Temperature: 5 - 40 °c
- Max Container Temperature: 70 °c
- Ultrasonic Frequency: 40kHz
- Electronic timer: 0 - 30 minutes
- Power supply: 230VAC / 50Hz
- Power Consumption: 50W
- Weight: 1Kg
- Dimensions: 100 x 164 x 176 mm (W x H x L)

Standard configuration

- DUC-3110 Injector Cleaner
- Top Cover
- Injector Mesh Cradle
- Power Supply Cable
- User Manual
- 1 Litre Cleaning Solution CS3130
