

# NEWS FROM BOSTON

## ANY POST CONTROL!

Now available on all Boston 4-post lifts

### APC - THE WAY FORWARD

Any Post Control (APC), claimed to be the most significant advance in vehicle lift technology for many years has recently been launched by Boston Garage Equipment. All 4 post lifts in the Boston range are now low-voltage prewired enabling

control of the lift from any post.

In busy workshops, especially MoT premises, the accrued savings are considerable. Boston calculates that saving just 10 minutes per day can actually cover the lift purchase payments with APC. In Europe APC is unique to Boston, and the option is currently included free with all their ATL lifts.

Ray Calcutt, MD at Boston commented: "It's difficult to see why all major manufacturers are not considering the time saving and user convenience, when APC also adds

income over time to fully pay for the vehicle lift. It really is an incredible win-win benefit, supported by customer feedback which is all very positive. APC can be added at any time to the current range of Boston lifts, and this is proving popular with garages that want up-to-date equipment, which is a growing sector of the garage equipment market."

Boston APC is scheduled to be on show at 2015 Moscow Automechanika, to meet the interest already shown from several East European countries.

- Low voltage pre-wired throughout for APC
- Convenient, time-saving and future-proof
- Just 'plug in and go' from any post, automatically isolating all other posts
- FREE on all ATL lifts

BOSTON'S  
NEW TYRE BAY  
EQUIPMENT

New tyre equipment added to boston range

Boston start the New Year with the launch of 4 new products, built in Europe to their usual very high standards.

Two models of Tyre Changers BTM-420 and BTM-420L now join the Boston range, colour co-ordinated to complement their workshop equipment and MoT bay packages. Both models are heavy-duty, fully automatic and suited to both occasional users and busy tyre bays. The BTM-420 boasts 24" clamping capability and BTM-420L manages 26". Alongside are two new wheel balancers BWB-92D and BWB-93D, also built to high construction standards in Europe, and colour co-ordinated. Both models handle 30" rims and are ergonomically designed with smooth, quiet, fast operation. The BWB-92D accepts 2D data input, while the premium BWB-93D accepts 3D data.

#### THE BOSTON 4-POST LIFT RANGE FEATURES AND BENEFITS:

- UK manufactured electronic controls
- Integrated hydraulic play detectors
- 4 to 6 tonne with a choice of lengths
- Multifunction membrane keypad
- 630mm wide user-friendly platforms
- Recessed stainless turning plates
- UK designed, built in Europe
- Reinforced substructure
- Saving just 10mins/day can cover your lift lease purchase payment !

## WHY BUY A NEW LIFT THAT'S ALREADY OUTDATED ?
